

Jira User Story Fetching and Test Case Generation

- Clicking the **Fetch User Stories** button retrieves the user stories from Jira and displays them on the page.

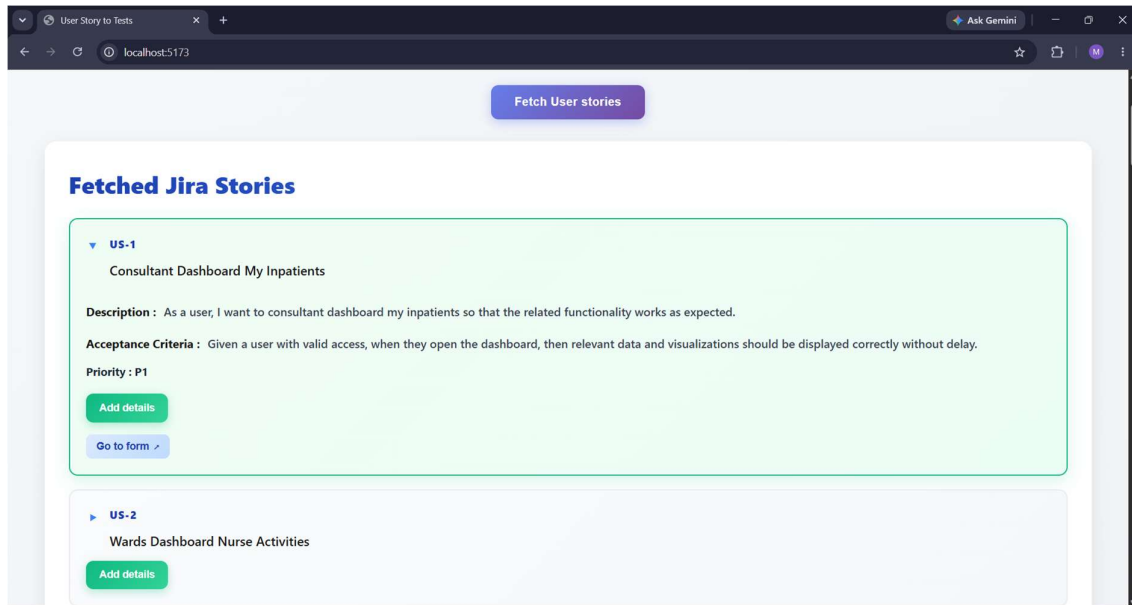

The screenshot shows a web browser window with the address bar displaying 'localhost:5173'. The page has a dark header with 'Ask Gemini' on the right. The main content area has a light blue background. At the top, there's a section titled 'User Stories to Test' with the subtitle 'Generate comprehensive test cases from your user stories'. Below this is a purple button labeled 'Fetch User stories'. Underneath is a white box titled 'Testcase Generation Form'. Inside this box, there's a 'Story Title *' field with a placeholder 'Enter the user story title...' and a 'Description' field with a placeholder 'Additional description (optional)...'.

- For each fetched user story, key details such as **Title**, **Description**, **Acceptance Criteria**, and **Priority** are shown below the dropdown for review.

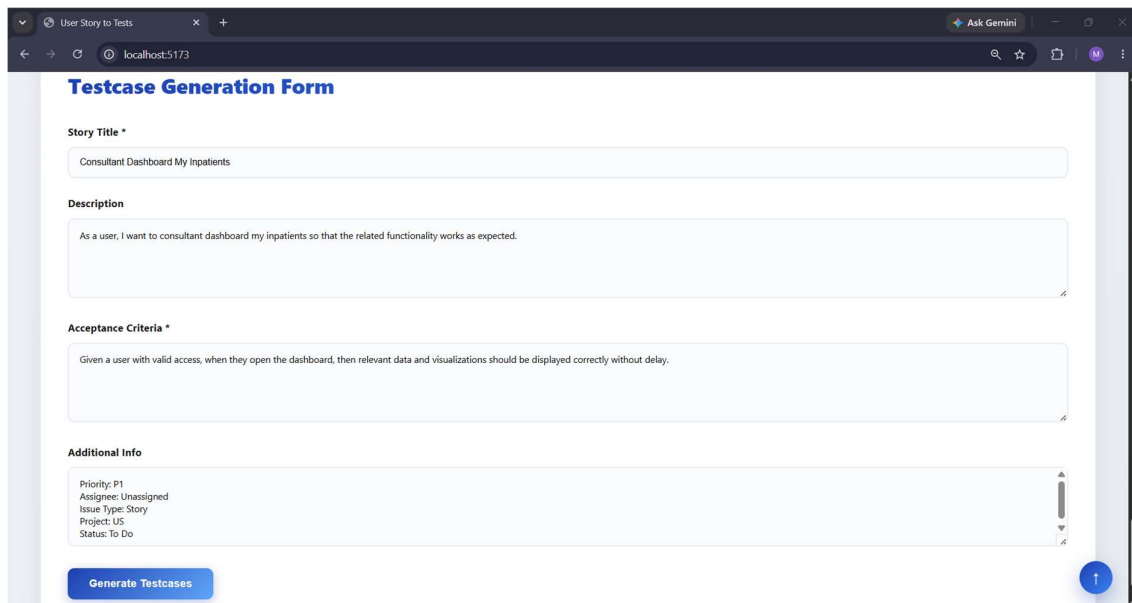

The screenshot shows the same web browser window, but now the 'Fetch User stories' button has been clicked. The 'Testcase Generation Form' box is still present. Below it, a new section titled 'Fetched Jira Stories' is visible. It contains two story cards. The first card, labeled 'US-1', has a green background and contains the title 'Consultant Dashboard My Inpatients', a description 'As a user, I want to consultant dashboard my inpatients so that the related functionality works as expected.', acceptance criteria 'Given a user with valid access, when they open the dashboard, then relevant data and visualizations should be displayed correctly without delay.', and priority 'P1'. It has a green 'Add details' button. The second card, labeled 'US-2', has a light blue background and contains the title 'Wards Dashboard Nurse Activities' and a green 'Add details' button.

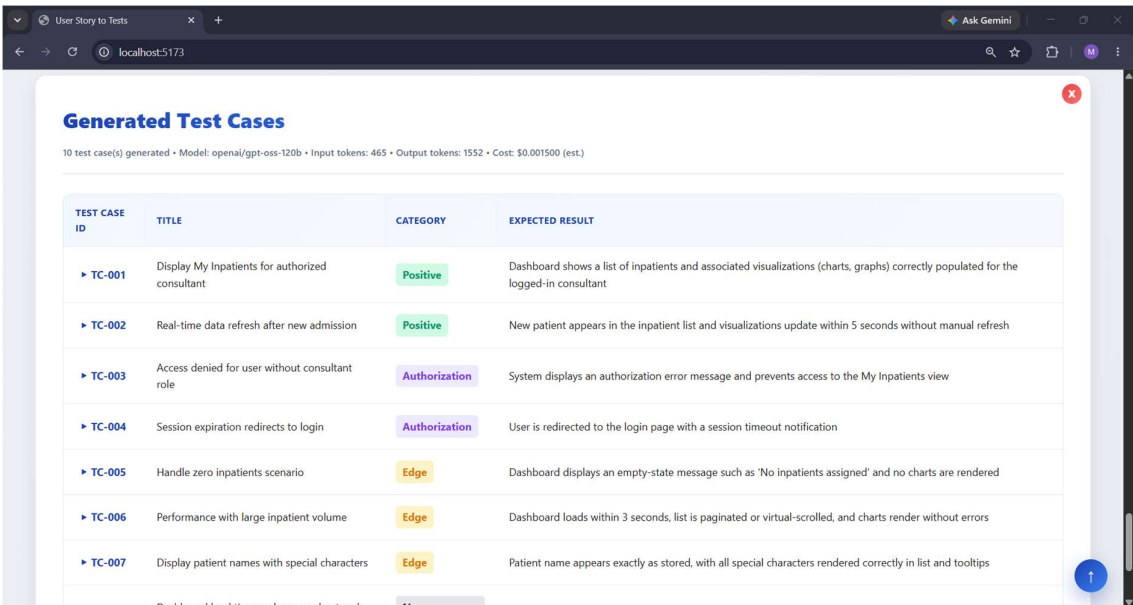

- Clicking the **Add Details** button automatically populates the **Test Case Generation Form** with the selected user story details. Once the details are added, a **Go to Form** button becomes available. Clicking this button automatically scrolls the page to the **Test Case Generation Form** section.

- The selected user story details are automatically populated in the **Test Case Generation Form**. Clicking the **Generate Test Cases** button generates test cases based on the provided user story details.

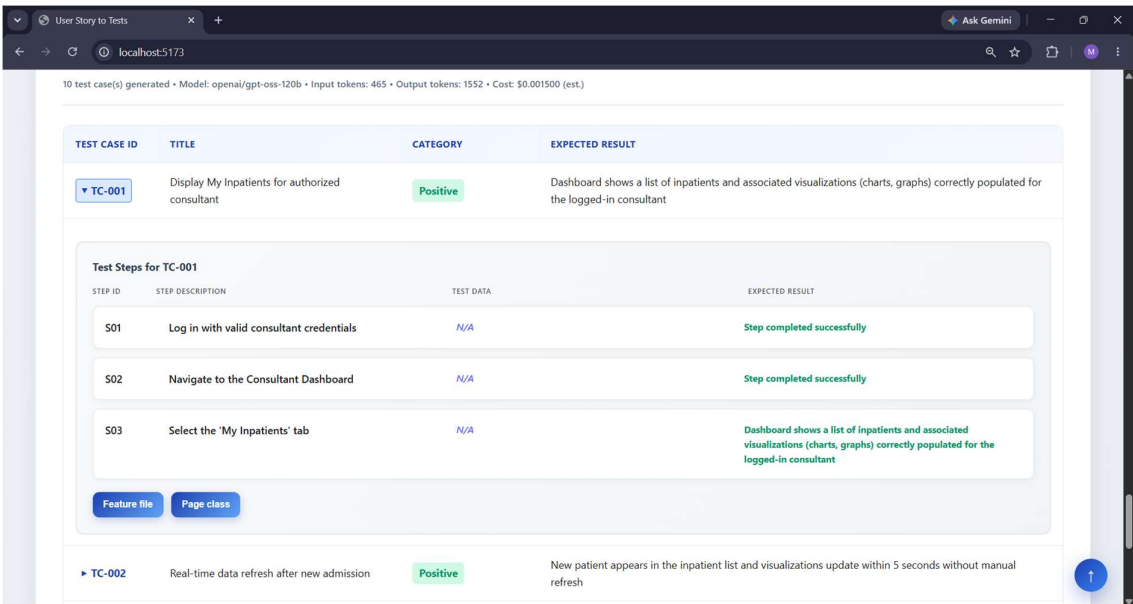

- The testcases are generated.

The screenshot shows a web browser window with the address bar displaying 'localhost:5173'. The page title is 'User Story to Tests'. The main heading is 'Generated Test Cases'. Below the heading, a status bar indicates '10 test case(s) generated • Model: openai/gpt-oss-120b • Input tokens: 465 • Output tokens: 1552 • Cost: \$0.001500 (est.)'. The test cases are listed in a table with columns: TEST CASE ID, TITLE, CATEGORY, and EXPECTED RESULT. The table contains 7 test cases, each with a unique ID, a description of the test, a category (Positive, Authorization, or Edge), and the expected outcome. A blue button with an upward arrow is visible in the bottom right corner of the table area.

TEST CASE ID	TITLE	CATEGORY	EXPECTED RESULT
▶ TC-001	Display My Inpatients for authorized consultant	Positive	Dashboard shows a list of inpatients and associated visualizations (charts, graphs) correctly populated for the logged-in consultant
▶ TC-002	Real-time data refresh after new admission	Positive	New patient appears in the inpatient list and visualizations update within 5 seconds without manual refresh
▶ TC-003	Access denied for user without consultant role	Authorization	System displays an authorization error message and prevents access to the My Inpatients view
▶ TC-004	Session expiration redirects to login	Authorization	User is redirected to the login page with a session timeout notification
▶ TC-005	Handle zero inpatients scenario	Edge	Dashboard displays an empty-state message such as 'No inpatients assigned' and no charts are rendered
▶ TC-006	Performance with large inpatient volume	Edge	Dashboard loads within 3 seconds, list is paginated or virtual-scrolled, and charts render without errors
▶ TC-007	Display patient names with special characters	Edge	Patient name appears exactly as stored, with all special characters rendered correctly in list and tooltips

- Expanding a test case displays its corresponding test steps on the page. The **Feature File** and **Page Class** buttons are available below the test case table. Clicking the **Feature File** button generates the feature file for the selected test case. Clicking the **Page Class** button generates the corresponding page class for the selected test case.

The screenshot shows the same web application, but with the first test case (TC-001) expanded. The table now shows only TC-001. Below the table, a section titled 'Test Steps for TC-001' contains a sub-table with columns: STEP ID, STEP DESCRIPTION, TEST DATA, and EXPECTED RESULT. This sub-table lists three steps: S01 (Log in with valid consultant credentials), S02 (Navigate to the Consultant Dashboard), and S03 (Select the 'My Inpatients' tab). Below the sub-table, there are two buttons: 'Feature file' and 'Page class'. The main table also shows the next test case, TC-002.

TEST CASE ID	TITLE	CATEGORY	EXPECTED RESULT
▼ TC-001	Display My Inpatients for authorized consultant	Positive	Dashboard shows a list of inpatients and associated visualizations (charts, graphs) correctly populated for the logged-in consultant

Test Steps for TC-001

STEP ID	STEP DESCRIPTION	TEST DATA	EXPECTED RESULT
S01	Log in with valid consultant credentials	N/A	Step completed successfully
S02	Navigate to the Consultant Dashboard	N/A	Step completed successfully
S03	Select the 'My Inpatients' tab	N/A	Dashboard shows a list of inpatients and associated visualizations (charts, graphs) correctly populated for the logged-in consultant

[Feature file](#) [Page class](#)

▶ TC-002	Real-time data refresh after new admission	Positive	New patient appears in the inpatient list and visualizations update within 5 seconds without manual refresh
----------	--	----------	---

- Feature file is generated

The screenshot shows a web browser window with the address bar displaying 'localhost:5173'. The page title is 'User Story to Tests'. The main content area displays 'Test Steps for TC-001' in a table format. The table has four columns: 'STEP ID', 'STEP DESCRIPTION', 'TEST DATA', and 'EXPECTED RESULT'. There are three rows of test steps. Below the table, there are two buttons: 'Feature file' and 'Page class'. The 'Feature file' button is highlighted, and a modal window is open showing the generated feature file code. The code is in Gherkin syntax, starting with 'Feature: Consultant Dashboard My Inpatients' and 'Scenario: Display My Inpatients for authorized consultant'. A 'Copy' button is visible in the top right corner of the modal.

STEP ID	STEP DESCRIPTION	TEST DATA	EXPECTED RESULT
S01	Log in with valid consultant credentials	N/A	Step completed successfully
S02	Navigate to the Consultant Dashboard	N/A	Step completed successfully
S03	Select the 'My Inpatients' tab	N/A	Dashboard shows a list of inpatients and associated visualizations (charts, graphs) correctly populated for the logged-in consultant

Feature File Copy

```
Feature: Consultant Dashboard My Inpatients
# Acceptance Criteria: Given a user with valid access, when they open the dashboard, then relevant data and visualizations should be displayed correctly without delay.

Scenario: Display My Inpatients for authorized consultant
    Given a consultant logs in with valid credentials
    When the consultant navigates to the Consultant Dashboard
    And selects the "My Inpatients" tab
    Then the dashboard should display a list of inpatients
    And the associated visualizations (charts, graphs) are correctly populated for the logged-in consultant
```

- Page class is generated

The screenshot shows a web browser window with the address bar displaying 'localhost:5173'. The page title is 'User Story to Tests'. The main content area displays a generated page class code. The code is in TypeScript and defines a class 'ConsultantDashboardMyInpatientsPage' that inherits from 'Page'. It includes selectors for login fields, dashboard navigation, and inpatient data. A 'Copy' button is visible in the top right corner of the code block.

Page Class Copy

```
import { Page } from '@playwright/test';

export class ConsultantDashboardMyInpatientsPage {
    private page: Page;

    // Login selectors
    private usernameInput = 'input#username';
    private passwordInput = 'input#password';
    private loginButton = 'button[type="submit"]';

    // Dashboard navigation
    private dashboardLink = 'a[href="/consultant/dashboard"]';

    // My Inpatients tab and related elements
    private myInpatientsTab = 'button[data-tab="my-inpatients"]';
    private inpatientsTable = 'table#inpatients-list';
    private chartContainer = 'div.inpatients-charts';

    constructor(page: Page) {
        this.page = page;
    }

    async login(username: string, password: string): Promise<void> {
        await this.page.waitForSelector(this.usernameInput);
        await this.page.fill(this.usernameInput, username);
        await this.page.fill(this.passwordInput, password);
        await this.page.click(this.loginButton);
        await this.page.waitForNavigation({ waitUntil: 'networkidle' });
    }
}
```

- Clicking the **Up Arrow** button navigates the user back to the top of the page, making it easy to view and select other user stories. The generated test cases can be collapsed or closed, allowing the user to switch to and work on other user stories without cluttering the page.

The screenshot shows a web application interface. At the top, there's a browser window with the address bar showing 'localhost:5173'. Below the browser, the application has a dark header with 'User Story to Tests' and 'Ask Gemini' buttons. The main content area is divided into two sections. The first section, 'Additional Info', contains a light blue box with details: 'Priority: P1', 'Assignee: Unassigned', 'Issue Type: Story', 'Project: US', and 'Status: To Do'. Below this is a blue 'Generate Testcases' button. The second section, 'Generated Test Cases', has a red close button in the top right. It displays '10 test case(s) generated • Model: openai/gpt-oss-120b • Input tokens: 465 • Output tokens: 1552 • Cost: \$0.001500 (est.)'. Below this is a table with columns: 'TEST CASE ID', 'TITLE', 'CATEGORY', and 'EXPECTED RESULT'. The first row shows 'TC-001' with the title 'Display My Inpatients for authorized consultant', category 'Positive', and expected result 'Dashboard shows a list of inpatients and associated visualizations (charts, graphs) correctly populated for the logged-in consultant'. Below the table is a section titled 'Test Steps for TC-001' with a table containing columns 'STEP ID', 'STEP DESCRIPTION', 'TEST DATA', and 'EXPECTED RESULT'. A blue 'Up Arrow' button is located at the bottom right of the application.
